

FraudAlert™ SECURITY

Ensure Your Business and Customers
are Protected

International revenue share fraud (IRSF) is one of the biggest crimes occurring in international telecom. IRSF includes but is not limited to subscription and Wangiri fraud, roaming fraud, and PBX hacking. All result in the same outcome: retailers lose money, customers are inconvenienced, and fraudsters make money.

WHY DOES YOUR BUSINESS NEED PROTECTION?

The international nature of IRSF makes prosecuting fraudsters across borders complex and cost-prohibitive for law enforcement. As an international voice carrier you need to protect yourself. Simply closing off high-risk destinations is unrealistic for retail carriers operating in highly competitive markets and subject to regulatory access rules.

WHY CHOOSE iBASIS FraudAlert?

iBASIS developed FraudAlert to combat IRSF and Wangiri scams. FraudAlert complements your existing fraud prevention ecosystem by creating a final layer of protection and security. iBASIS' application not only prevents fraud, but also allows customers to profitably monetize previously high-risk destinations that were continually exposed to fraud. Our experience has taught us that any application built for telecom must allow customers to manipulate the tool to fit their specific business needs. FraudAlert gives your fraud prevention team the power to customize thresholds and decide what actions to take. All of this is supported by reporting so you can see what has been done on your behalf.

FraudAlert™ SECURITY SERVICE SNAPSHOT

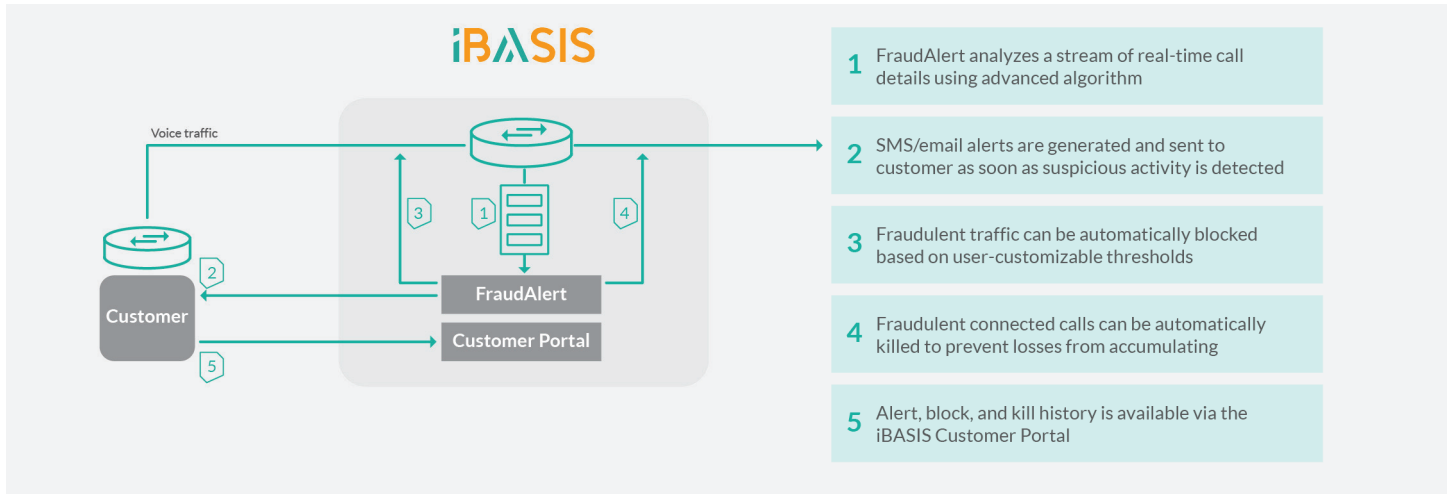

- Immediate alerts via SMS/email
